

Genpact and RAGE Frameworks Partner to Combine Lean Digital Strategy and Artificial Intelligence to Automate Financial Institutions' Complex Processes

RAGE joins Genpact's unique Silicon Valley-based Lean Digital(SM) incubation program that harnesses disruptive technology for business process innovation

NEW YORK, Nov. 19, 2015 [/PRNewswire/](#) -- Genpact (NYSE: G), the architect of the Lean DigitalSM enterprise, and RAGE Frameworks, a leader in cognitive intelligence and business process automation technology, are partnering to harness artificial intelligence technologies that push the boundaries of existing automation systems in financial institutions.

Genpact's Lean DigitalSM approach combines design thinking methodology with an operator's view of lean processing and advanced technologies to re-architect business processing into the digital future. The RAGE EnterpriseTM platform uses artificial intelligence and business process automation technologies in a model-driven application development framework to eliminate traditional and cumbersome manual work such as data standardization and semantic analytics, and expensive system replacements and satellite system enhancements.

Genpact and RAGE's joint solutions drive intelligent, dynamic, and automated use of data sources both in and outside of financial institutions' firewalls to improve risk decisions and drive greater efficiencies. The solutions also facilitate the orchestration of intelligent processes across the enterprise, making operations more adaptive, accurate, and timely, in a seamless manner. For example, Genpact clients can now easily extract and interpret from reported global events in real time to monitor credit risk, and then provide valuable internal early warning triggers, and drive needed interventions dynamically.

More broadly, these solutions drive greater value by integrating artificial intelligence and automation in commercial lending, policy underwriting, client onboarding, multi-system reconciliation, financial statement spreading, vendor screening, and investment research.

"Digital technologies like the ones we are working on with RAGE allow us to drive complete transformation of the work we do for our clients, and re-architect traditionally manual business processing to be more automated, intelligent, and adaptive," **said Sanjay Srivastava, senior vice president and chief digital officer, Genpact.** "Lean Digital helps us bridge the gap between the potential of digital and the reality of most middle and back offices still burdened with complex or exception processing work that has had to be done manually."

These solutions are part of Genpact's Systems of EngagementTM portfolio, which embeds leading digital technologies within a cloud-based offering that is added on top of clients' existing systems to streamline and transform operations in an agile and flexible manner. As a result, clients can be more effective in responding to new market opportunities, complying with evolving regulatory requirements, and competing effectively with new disruptors in their ecosystems.

RAGE also joins Genpact's incubation program, a unique Silicon Valley-based partner ecosystem that combines the power of new disruptive technologies with Genpact's deep industry domain and hands-on process expertise, all within one of the largest real-world business processing environments.

"We are excited to partner with Genpact, and combine its financial services domain and process management expertise with our deep experience with cutting-edge automation and artificial intelligence technology," **said Dr. Venkat Srinivasan, chief executive officer, RAGE Frameworks.** "We look forward to actively participating in Genpact's incubation program to continue to innovate and deliver new solutions for our clients."
