Genpact Launches Agentic Record-to-Report Suite to Improve Finance Productivity, Controls, and Close Predictability

Latest Agentic Solution helps reduce peak financial close effort by up to 40% and resolve up to 99% of intercompany breaks in real time

NEW YORK, Sept. 1, 2026 /PRNewswire/ -- Genpact (NYSE: G), the Agentic Operations company, today announced the general availability of the Genpact Record-to-Report Suite, an agentic solution built to help finance teams improve close efficiency, strengthen controls, and provide more reliable numbers throughout the financial close cycle.

Extending Genpact's agentic solution portfolio deeper into the financial close, the Genpact Record-to-Report (R2R) Suite applies agentic AI to journal entry, reconciliation, and intercompany processes, enabling finance teams to move from reactive close activities toward more predictive, insight-driven operations. While traditional close automation follows rules to execute what's already defined, Genpact's agents investigate exceptions in the last mile, resolve the root causes, and carry that learning into the next close so each cycle gets faster and cleaner than the last. This reflects Genpact's broader Agentic Operations strategy, which pairs AI agents with deep process expertise to move enterprises from experimentation to scale.

Expected outcomes* from adopting the Genpact R2R Suite include:

- **Faster close, less peak effort:** Up to 40% lower peak financial close effort through agentic journal entries and intercompany matching, with actionable insights arriving faster.
- **Audit-ready controls by design:** First-pass reconciliation yield of more than 95%, supported by preventive controls, real-time validation, and always-on automated certification.
- **Fewer surprises at close:** Up to 99% of intercompany breaks resolved in real time, helping reduce top-side adjustments and late-cycle close disruptions.
- **Earlier access to reliable numbers:** Finance teams gain earlier access to decision-ready actuals, enabling improved forecasting, scenario planning, and management reporting.

"CFOs don't need more speed alone; they need greater confidence in their numbers and fewer surprises at close," **said Vijay Vijayasankar, Global Agentic AI Officer, Genpact**. "Our R2R agents reason to help finance teams identify and fix the root causes of exceptions, improve predictability, and create capacity for higher-value work, while keeping client data within their own environment. That's what enables finance to move from closing the books to strategically steering the business."

Integrated capabilities across the financial close

Built on decades of running finance operations for global enterprises, the Genpact R2R Suite pairs process intelligence with agents trained on real transactions and exceptions. The suite includes three independent modules on a shared agentic intelligence layer that can be deployed individually or together, based on a client's operating model, process maturity, and transformation priorities:

- **Genpact Record-to-Report Journal Entry orchestrates ingestion, validation, anomaly detection, and posting.**
- **Genpact Record-to-Report Reconciliation resolves transaction matching and evidence validation.**
- **Genpact Record-to-Report Intercompany detects mismatches, classifies root causes, orchestrates**

resolution, automates accruals, and reconciles balances before close.

Because the agents are embedded in live finance operations, every exception resolved strengthens R2R process intelligence, enabling finance teams to identify issues earlier, improve predictability, and close with greater confidence.

Tenneco, a leading global manufacturer and distributor of technologies for original equipment and aftermarket customers across the mobility and industrial markets, is among the enterprises exploring how agentic AI can help its finance function move from reconciling the past to guiding what's next for the business.

"A finance organization creates the most value when its people are steering the business, not re-verifying numbers that should already be right," said Manavendra (Manu) Sial, Chief Financial Officer, Tenneco. "We're piloting the Genpact Record-to-Report Suite because agentic AI gives us a credible path to a close that surfaces issues at the root, earlier in the cycle. The goal is straightforward: less time proving the numbers, more time acting on them, with the confidence to make sharper, faster decisions."

By combining Genpact's domain expertise in finance operations with record-to-report process intelligence and agentic AI, the Genpact R2R Suite helps organizations accelerate the close while enabling finance teams to focus less on reconciliation and more on guiding business performance.
